

Matter No 24- Major Infrastructure and Oldbury Power Station

Respondent Number 2797889

Respondent - Barry Turner – Oldbury on Severn Parish Council

The Core Strategy does not give adequate consideration to the **decommissioning** of the Magnox Power Station facility and the potential for cumulative impact taking into account other possible developments in the local area.

There will be periods of high activity and periods of low activity during the lifetime of the decommissioning process which will impact on the local area and communities particularly in relationship to transportation and the use to which the local roads will be put during the high activity periods.

More consideration of the cumulative effects of this combined with the possibility of a New Nuclear Facility and the impact on local communities including Thornbury and communities up to the Motorway Junction 14 is required .
